People who complain of receiving through their domestic faucets water that takes on a muddy appearance immediately after it is released from the spigot may be interested to know that the cloudiness is due to air in the pipes. Inasmuch as the water department satisfactorily expedited the work of re-establishing the grade of the main along the East Barre road, it is devoting a part of its time this week to closing up the holes where air is supposed to penetrate the pipes. The water is not polluted and when the job on the Orange reservoir main is fully completed, the water will regain its former clarity.

What is Pure Air?

New York, which has even more state officials and commissions than Massachusetts.

settles, has a state commission on ventilation. For the past two or three years it has been conducting experiments, especially in the schools, and the publication of the results of these experiments is calculated to light the fire of battle of those who are devoted to the fresh air cult. We are told that school children in a room liberally provided with fresh air do no better work and make no more progress than those in a room where the air is in large part re-circulated and breathed over and over again.

Of course, there is no defense for dead and stagnant air. Nobody rises to dispute that foul air is a poison, but the argument comes that a devotion to fresh air is little better than a superstition and that proper circulation has all the advantages of fresh air without its dangers. Beyond doubt there is much vigor in the phrase "proper circulation" and men of science are likely to wrangle loud and long over it. To keep air at the right temperature, humidity and composition, so that it may be breathed over and over again with no ill effects, may be theoretically simple and desirable, while it may be in practice a problem filled with all but insurmountable difficulties in most places where many persons gather.

Modern gymnasiums do not depend on open windows, but have an apparatus that "washes" the air once used, and cools or warms it as the case may be, giving it the amount of moisture proper to its temperature. That sort of thing may be possible in schools and halls, as the experiments of the New York commission indicate, but for practical purposes the world will be wise to cling with more enthusiasm, rather than less, to the fresh air cult that has been the development of our generation. The old slur that "New England air ought to be good because the people use so little of it" no longer applies, and the wholesome, invigorating effect of outdoor air, day and night, has been so well demonstrated that nothing should be allowed to turn us back toward former conditions.
